SIMONIZ CERAMIC SEALANT

A major breakthrough in the car wash industry, Simoniz has developed a unique molecule that when combined with a ceramic polymer and applied to the exterior surface of a vehicle, it chemically bonds with the vehicle's paint and creates a layer of durable protection. This bonding occurs because the sealant carries positively charged ions that attract themselves to the negatively charged surface of the vehicle, attracting itself like a magnet. This coating is highly hydrophobic.

Simoniz Ceramic Sealant creates such a strong layer of protection, it will protect the vehicle's surface from the ultraviolet rays of the sun and can slow down the process of oxidation substantially. This coating will also produce a surface that is chemically resistant to environmental acidic elements, etching and staining.

Being hydrophobic, Simoniz Ceramic Sealant will repel water. When water makes contact with a coated surface, it will bead up for the faster runoff. The ceramic coating makes it more difficult for grime and mud to stick to the vehicle. If these elements should adhere to the surface, the cleaning process is faster and easier.

Simoniz Ceramic Sealant will improve the reflective properties of both the paint as well as the underlying clear coat, leaving the vehicle with a clear, deep shine. Because of its extreme durability, Simoniz Ceramic Sealant will protect the vehicle's gloss for longer stretches of time between car washing.
